

Installation Instructions for Non-Lighted Wall Mirrors with Decorative Wall Nuts

Models: 119, 201, 203, 206, 208, 211, 210

1. Remove the Back Plate by unscrewing the two decorative nuts from the mounting assembly. Separate the Back Plate from the mirror mount assembly.

2. Choose an installation height that best serves your purposes. Determine if the wall where you are planning to mount your mirror requires a wood screw or some other type of fastener. Install the Back Plate by installing screws or other fasteners into the wall until the plate is level and secure. Use at least two fasteners for better mirror stability.

3. Place the mirror attached to the decorative wall plate over the two bolts that are on the wall mount back plate. Screw on decorative nuts to secure your mirror.

*When your mirror is Installed, avoid hanging items on the mirror or arm to prevent damage.
